

Dapr: Distributed Application Runtime

Chris Wiederspan
Azure App Dev Specialist

Software Innovation Collision

State of Enterprise Developers

Being asked to develop resilient, scalable, microservice-based apps that interact with services

Use multiple languages and frameworks during development

Focus on building apps not infrastructure

What is holding back microservice development?

Have limited tools and programming model runtimes to build distributed applications

Programming model runtimes have narrow language support and tightly controlled feature sets

Runtimes only target specific infrastructure platforms with limited code portability across clouds and edge

Dapr Goals

Best-practices building blocks

Any language or framework

Consistent, portable, open APIs

Adopt standards

Extensible and pluggable components

Platform agnostic cloud + edge

Community driven vendor neutral

Dapr is a portable, event-driven runtime that
makes it easy for developers to build
resilient, microservice applications that run
on the cloud and edge

Microservice building blocks

Standard APIs accessed over http/gRPC protocols from user service code

<http://localhost:3500/v1.0/invoke/cart/method/neworder>

<http://localhost:3500/v1.0/state/inventory/item67>

Runs as local "side car library" dynamically loaded at runtime for each service

Application code

Microservices written in

Any code or framework...

HTTP API

gRPC API

Service-to-service invocation

State management

Publish and subscribe

Resource bindings and triggers

Actors

Observability

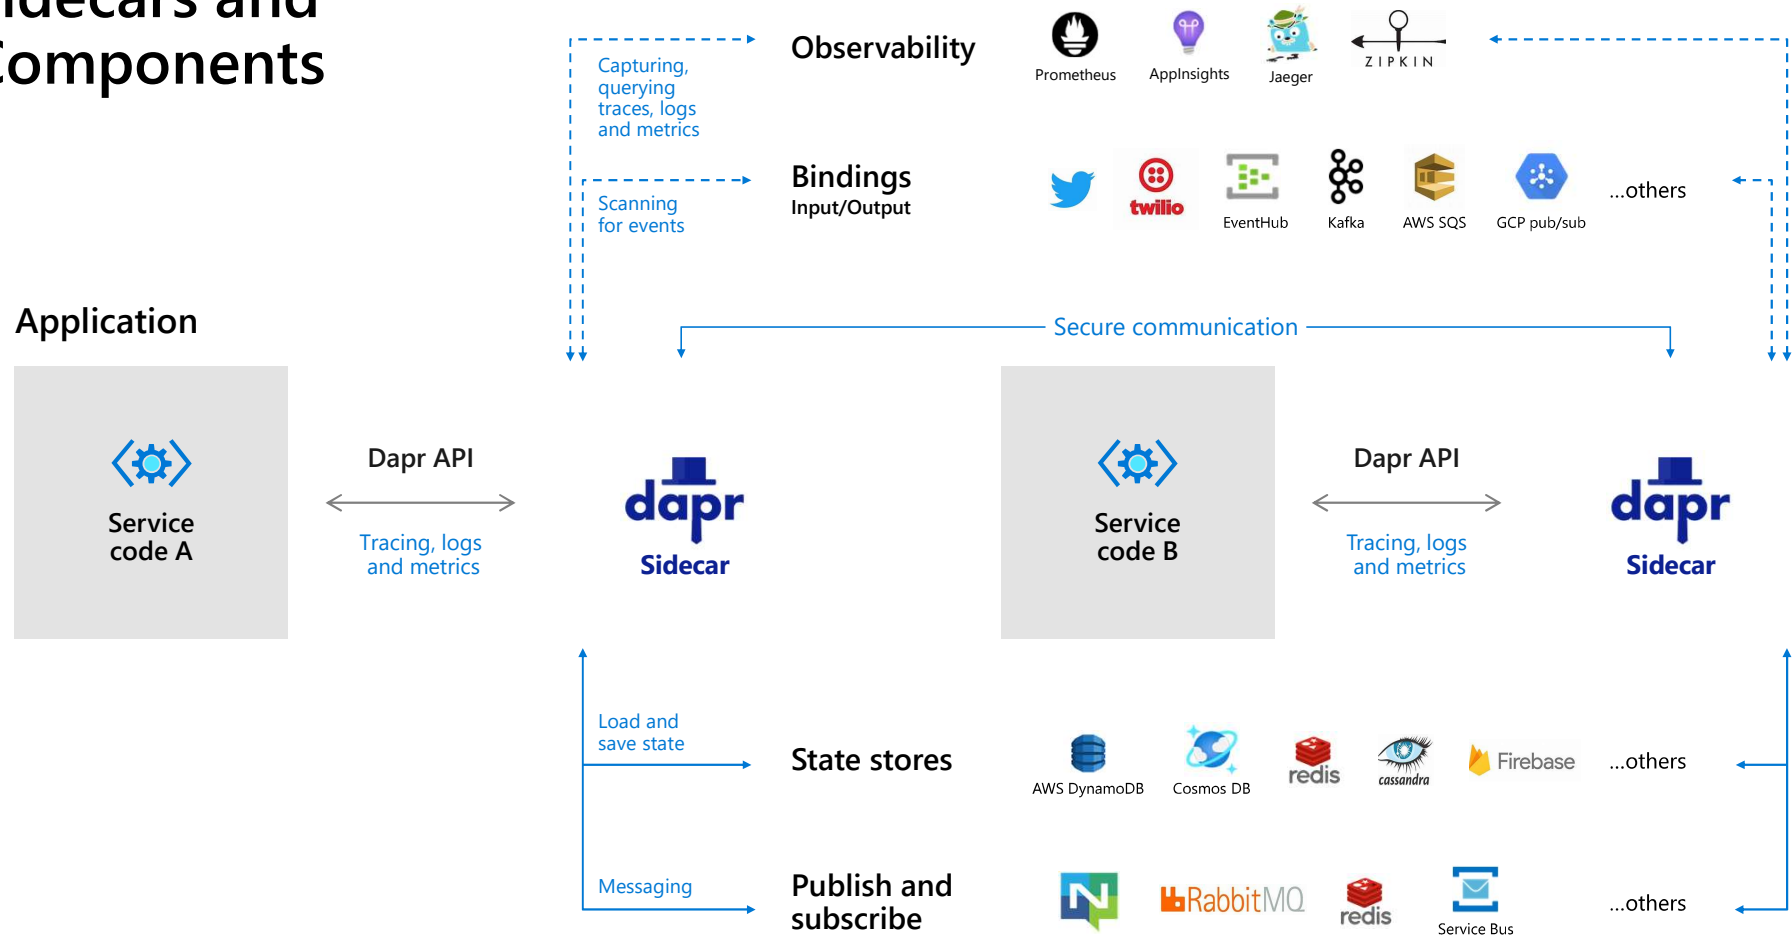

Secrets

Extensible

Sidecars and Components

Microservice building blocks

Service invocation

Post

<http://localhost:3500/v1.0/invoke/cart/method/checkout>

```
{
  "user": "johndoe",
  "cart": "0001"
}
```

Post

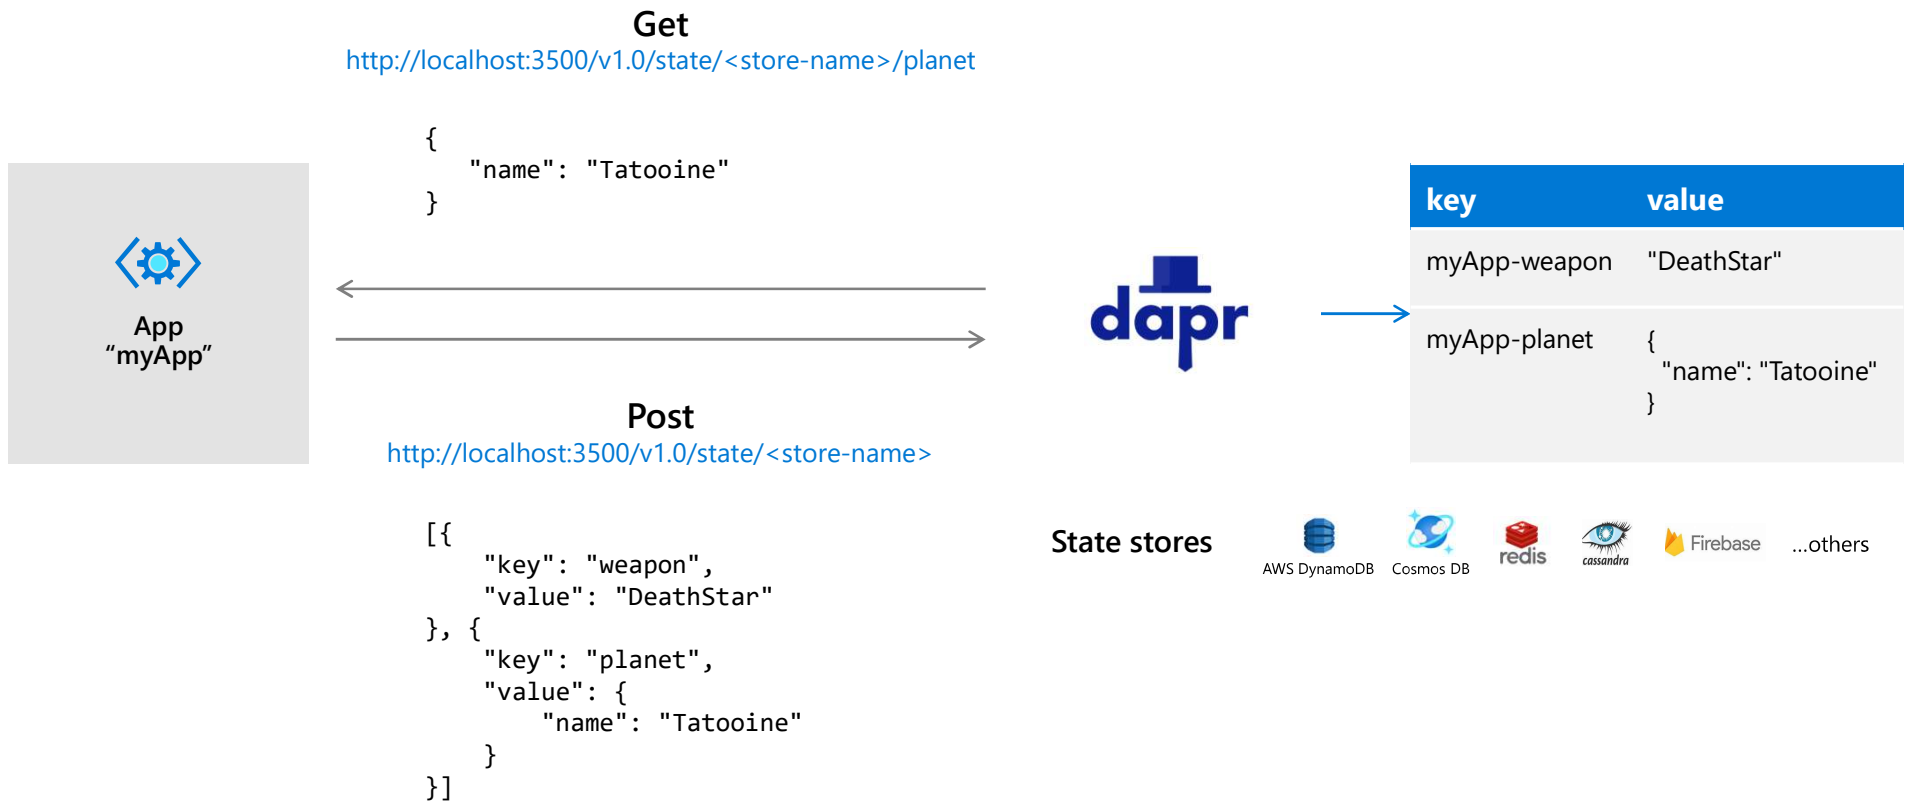

<http://10.0.0.2:8000/checkout>

```
{
  "user": "johndoe",
  "cart": "0001"
}
```

Microservice building blocks

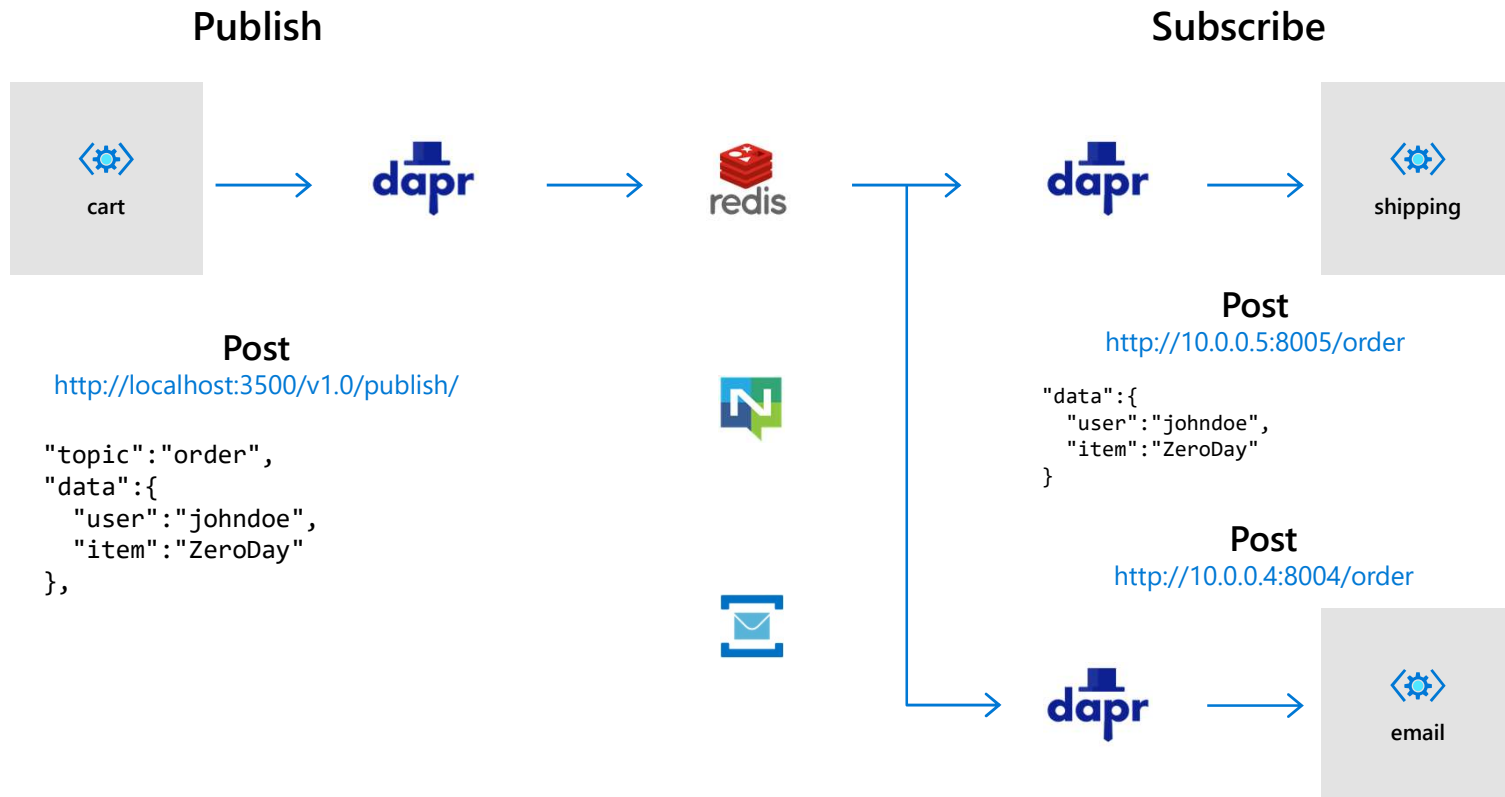

State management: key/value

A screenshot of the Dapr GitHub repository page. The top section shows the repository name 'Dapr' with its logo and a description: 'Distributed Application Runtime. An event-driven, portable runtime for building microservices on cloud and edge.' Below this is a navigation bar with links to Repositories (22), Packages, People (98), Teams (4), Projects (13), Insights, and Settings. The 'Pinned repositories' section displays four repositories: 'dapr' (6.1k stars, 351 forks), 'docs' (536 stars, 137 forks), 'cli' (63 stars, 27 forks), and 'components-contrib' (53 stars, 51 forks). The 'dapr / docs' repository is selected, showing the 'getting-started /' directory. The 'README.md' file is open, displaying the 'Getting Started' and 'Core Concepts' sections. The 'Getting Started' section describes Dapr as a portable, event-driven runtime for building resilient, stateless, and stateful applications. The 'Core Concepts' section is partially visible. In the bottom right corner, there is a small video inset showing a man in a blue t-shirt with the Dapr logo, speaking at a conference.
